

Taking the Lead on Early Detection

DEPARTMENT: Radiation Oncology, Los Angeles Medical Center

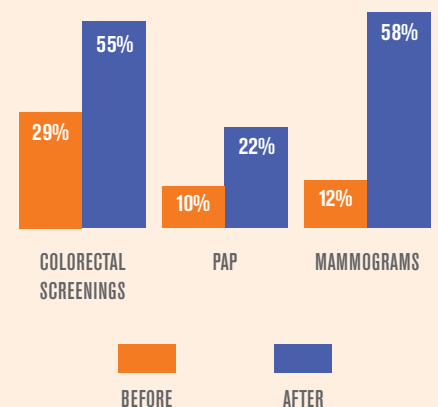

WHAT THEY DID

To improve the rate of regularly scheduled mammograms, colorectal screenings and Pap tests, the members of this UBT:

- + Create pending orders in KP HealthConnect® for patients who are due for screenings.
- + Assign medical assistants the responsibility of checking the Proactive Office Encounter before each appointment, alerting physicians when screenings are needed and making reminder calls to patients.
- + Give staff the ability to make appointments for patients while they are in the office.
- + Train lab colleagues to provide patients with instructions on how to complete the Fecal Immunochemical Test (FIT) kits.

RESULTS

MAY / JUNE 2014
